

Labouring Under Correct Knowledge 101

We are constantly being legislated and reminded of working safely in all things that we do in our personal and professional lives.

An often-used term for successful outcomes or avoidance of accidents is luck and we have come to think of it as a happy coincidence, rather than a positive occurrence that has come about by good planning and preparation, prior to a simple activity or more involved project taking place.

But if you look at the acronym of luck, it takes on a whole new meaning.

Labouring Under Correct Knowledge is the key to all successful outcomes in life, as opposed to TAC (Taking a Chance) that things will turn out OK!

Labouring means doing positive things yourself and not relying on rules, regulations and others to ensure that things remain safe and that all will be well at the end of the day.

Correct Knowledge is ensuring that the procedures to be undertaken are realistic and sound, based on known facts and not assumptions, modelling or theoretical interpretations from people with no real-life experience on the issue at hand.

So, when something turns out safely and gives the desired outcome, think about how luck played a part in the process.
